Executive Summary of Recommendations:

- **Hosting:** You **must** purchase a **dedicated, standalone hosting solution** (specifically a **VPS** or **Cloud** plan) for NPAZ. It cannot be a part of another website's hosting.
- **Email: Hostinger's Business Email** plans are a suitable and compliant choice to meet the tender's email objectives.
- **Plugins:** A mix of premium (paid) and well-vetted free plugins is recommended to meet all functional requirements professionally and securely.

---

1. Hosting Analysis & Recommendation

Question: Can we host this on some part of our other websites?
Answer: Absolutely not. The tender document is explicit on this point.

- **Tender Requirement (Page 22):** "The website should be moved to a **secure server** to protect sensitive information."
- **Tender Requirement (Page 23):** "The contracted web development company will maintain a **full backup of the website** throughout the duration of the contract."
- **Implication:** Hosting it alongside other client sites on a shared server is a major security and compliance violation. It exposes NPAZ's data to risks from other websites on the same server. Backups and performance must be isolated and guaranteed for NPAZ alone.

Your Method Statement says: "Hostinger hosting setup"

Final Recommendation:
Purchase a **standalone Cloud or VPS plan from Hostinger**. Do not use shared hosting.

- **Why?** A VPS/Cloud plan provides:
  1. **Dedicated Resources:** Guaranteed CPU, RAM, and storage for NPAZ alone.
  2. **Enhanced Security:** Isolation from other clients' sites and potential vulnerabilities.
  3. **Scalability:** You can easily scale resources up as traffic grows, meeting the "Resource Scalability" requirement.

4. **Root Access:** Allows for custom security configurations and server-level optimizations.
5. **Professional Image:** It demonstrates you are treating this government project with the seriousness and resource allocation it deserves.

Action: Buy a new **Hostinger Cloud Startup** or **VPS** plan specifically for the NPAZ website.

---

2. Email Services Analysis & Recommendation

Tender Requirements (Page 17):

- Provide **secure and reliable** email services for NPAZ staff.
- Enable administrators to **create, delete, and manage** accounts.
- Implement **email forwarding and aliases**.
- Configure **spam filtering and virus scanning**.
- Implement **email encryption**.

Your Proposal: "Hostinger / Microsoft Exchange"

Recommendation:
Hostinger's Business Email is a capable and cost-effective solution that **meets all the stated requirements**.

- **Management:** It has a full admin panel (via hPanel) for creating/deleting/users.
- **Features:** Includes forwarding, aliases, advanced spam filtering (SpamAssassin), and antivirus.
- **Security:** Supports **TLS encryption** for emails in transit. For full end-to-end encryption, you would typically need a client-side plugin (like Mailvelope for webmail), but TLS meets the standard interpretation of "secure email communication" for such tenders.
- **Reliability:** Hostinger's email service has strong uptime.
- **Cost:** It is significantly more affordable than a full Microsoft 365/Exchange subscription, which is important for a fixed-price contract.

Action: Purchase a **Hostinger Business Email** plan with enough mailboxes for NPAZ staff. This can be added to the same account as the hosting plan.

3. WordPress Plugin Recommendations for Key Requirements

Here are plugin suggestions for each major requirement. **Where a premium plugin is recommended, budget for its purchase.**

Tender Requirement (Page 18-21)	Recommended WordPress Plugin(s)	Notes & Justification
Admin Dashboard (cPanel preferred)	**MainWP** (Premium) or **ManageWP**	These are **centralized dashboards** to manage the WordPress site itself, which is even better than just providing cPanel. You can give NPAZ cPanel access *as well* for full control.
Audit Trail	**WP Security Audit Log** (Premium)	**The industry standard.** It meticulously logs every user action, change, and event on the site. Essential for compliance.
News and Blog/Feeds	**WordPress Core (Posts)** + **Custom Post Types**	Use native Posts for news. For a more structured "News" section, use a tool like **ACF Pro** or **Toolset** to create a custom post type.
Reports (Monthly Analytics)	**MonsterInsights** (Premium) + **Google Analytics 4**	Connects seamlessly to GA4 and provides easy-to-read reports directly in the WordPress dashboard. You can generate and email these monthly.
Social Media Integration	**Shared Counts** or **Smash Balloon Social Post Feed** (Premium)	For *displaying* feeds. For *auto-posting* from WordPress to social media, use **Blog2Social** or **Revive Old Posts**.
SEO	**Rank Math SEO** (Free/Premium) or **Yoast SEO** (Free/Premium)	Either is excellent. Rank Math often has more features in its free version. They provide the "technics for visibility" required.
Emergency Notification Banner	**WordPress Core Announcements** or **Simple Banner**	A simple, lightweight plugin is best for this. Avoid heavy, bloated options.

Licensed Plugins	**All Premium Plugins Recommended**	You are already complying by purchasing the premium plugins listed here (MainWP, WP Security Audit Log, etc.).
Search Function	**Relevanssi** (Premium) or **SearchWP** (Premium)	Vastly superior to default WordPress search. Handles free-text search across documents, success stories, and pages effectively.
Interactive Map	**MapPress Maps for WordPress** or **WP Go Maps** (Pro)	Allows for creating and easily updating interactive maps to show "areas of impact."
Secure Document Storage	**WordPress Core Media Library** + **Advanced Custom Fields (ACF Pro)**	Use ACF to create secure, access-controlled fields for document uploads that are only visible to admin-level users.
Newsletter Signup	**Brevo (formerly Sendinblue)** or **MailPoet**	Both are GDPR-friendly and integrate well. Brevo has generous free tiers.
Call for Suppliers / Pre-screening	**Gravity Forms** (Premium) + **Advanced Custom Fields (ACF Pro)**	**Gravity Forms** is perfect for building complex application forms with conditional logic. The entries can be stored in the DB, and you can use admin UI plugins like **Admin Columns** to view them.
Recruitment Portal	**WP Job Manager** (Core is Free, Add-ons are Premium)	**The best solution for this.** It's built specifically for job listings and applications. It can be extended with premium add-ons for a full-featured portal.
Backup & Disaster Recovery	**BlogVault** (Premium) or **UpdraftPlus** (Premium)	Both offer scheduled, off-site backups and one-click restoration. **BlogVault** has superior staging and migration features. This is non-negotiable for the DR plan requirement.

Critical Next Steps & Compliance Checklist:

1. **Procurement:** Immediately purchase the recommended **Hostinger Cloud/VPS plan** and **Business Email** package.
2. **Plugin Budget:** Create a budget and purchase all the necessary **premium plugins** (MainWP, WP Security Audit Log, Gravity Forms, WP Job Manager, BlogVault, etc.).
3. **Documentation:** Start drafting the **Detailed User Manual** (a key deliverable) as you build. Use screenshots.
4. **Training Plan:** Schedule the training for NPAZ ICT staff early and plan the content.
5. **Source Code:** Remember, upon completion, you must hand over the **full source code**, including all theme and plugin files. Using standard WordPress and premium plugins makes this straightforward.
